Luxaflex® EDGE LiteRise Roller Blinds

Cordless operating system for clean aesthetics and Child Safe Solution

Luxaflex Window Fashions are continuously at the forefront of innovative technology, child safety and on-trend designs, providing the ideal balance between style and functionality. The new Edge LiteRise Roller Blind is the latest introduction into the existing array of cordless, child safe options in the Luxaflex range of window coverings.

The Luxaflex Edge LiteRise Roller Blind operating system features a unique spring mechanism that allows for integrated and granular control of the shade, allowing you to raise and lower the shade stopping at any desired position.

Unlike traditional Spring Operated Roller Blinds, the intuitive Edge LiteRise Roller Blind is raised and lowered by hand at the bottom rail for smooth light operation.

Similar to Duette® LiteRise Shades, the patented design means no cords, ease of operation and instinctive control.

EDGE LiteRise Roller Blinds are available across the range of Luxaflex fabrics and Sunscreens.

Ideal Child Safety Solution

The patented design eliminates the cords providing increased safety for children and pets whilst creating an uncluttered look at the window.

Ease Of Operation

Unlike traditional spring operated roller blinds, the Edge LiteRise Roller Blind does not require a pull to engage the spring when raising of the shade is required. Traditional spring operated roller blinds are known for their tricky engagement and potential to accelerate away during operation.

The Edge LiteRise Roller Blind provides the consumer with a precise method of operation allowing for the ultimate in light and privacy control.

The patented spring mechanism allows for intuitive operation. This means that the Roller Blind can be precisely positioned anywhere along the drop and hold its position.

Simply push up to raise and pull down to lower.

Clean aesthetics and balanced light gap

The Edge LiteRise Roller Blind has an even and balanced light gap of approx 11mm providing improved aesthetics, minimising light streaming in from the outside.

The absence of a chain and chain tensioner provides a clean and uncluttered appearance at the window.

INSTALLATION SUITABILITY

Ideal for windows at a maximum height of 2.1 metres for ease of operation Maximum blind size is 2.1 metres drop and 2.6 metres width. LiteRise is available as a single or dual operated blind and can be used in conjunction with Luxaflex Edge Motorised Roller Blinds for the whole house solution.
